

Software Training Goes Virtual

The Challenge

Whether your team members and employees are working from home or on a limited capacity in the office, training is still a critical component for companies and employees. One of the biggest challenges is software training. The ability to put your employees in a lab and having trainers walk around to assist as each employee gets hands on action in the software is no longer a viable option. What now? How do you provide this critical training to build the expert teams necessary for your success?

Jigsaw Interactive lets your trainers review everyone's work, real-time through simultaneous multi-screen sharing. If any participant is struggling, the trainer can quickly move them to a private room to assist and then bring them back to the main session for continued group instruction.

The Key Components Of Jigsaw's Virtual Software Lab

- Quickly provide access for multiple trainees to share their screen simultaneously with all trainers.
- Each trainer can choose any screen share to expand for a single view of what the trainee is doing.
- Easily move any trainee into a private room for individual assistance.
- A trainer can share their screen with the group for showing "how to" while the training team reviews trainees' screens.

Jigsaw Interactive Is The Solution

Jigsaw Interactive provides an intelligent virtual classroom that far exceeds the capabilities of platforms like Microsoft Teams, Zoom, WebEx, Adobe Connect and others.

Collaborative Boards

Use our notepad to drop a specific instruction or to gather questions and feedback from the team. Capture a specific screen from the software and drop it to the whiteboard to quickly identify a critical point for the team.
